EDUCATION

York University, Lassonde School of Engineering

Toronto, ON

Bachelor of Engineering in Mechanical Engineering

September 2024 – Present

- **Awards:** BEST Entrance Award, 1st Place Winner - Automotive Innovation Hackathon
- **Relevant Coursework:** Manufacturing, Fluid Mechanics, Statics, Thermodynamics, Accounting and Finance

ENGINEERING EXPERIENCE

Fuel System Engineer | Powertrain Sub-team

Toronto, ON

Lassonde Motorsports (FSAE)

June 2025 – Present

- Leads design and integration of high-performance fuel systems in strict compliance with FSAE safety standards.
- Conducts Design for Manufacturing reviews to ensure component geometry meets vendor capabilities while maintaining FSAE safety tolerances.

VinPack: Portable EV Charging System

November, 2025

1st Place Winning Project, Automotive Innovation Hackathon | Y-Space

Toronto, ON

- Conceptualized and modeled a Dealer Priority EV Charging System using portable battery units to enable parallel EV charging, eliminating dealership charging bottlenecks.
- Developed the logic framework for a Technician Assist App that automates charging prioritization, leveraging overnight rates to reduce dealership electricity costs by up to 5x.

Automated Mechatronic Pet Feeding System

December, 2025

Instrumentation Project

Toronto, ON

- Designed a compact automated feeder with custom 3D-printed components, integrating an Arduino and Quanser DAQ to process real-time optical and load cell sensor data.
- Implemented LabVIEW VIs and Arduino C++ to control a state-machine architecture enabling fully autonomous food and water dispensing with <2s response time.

PROFESSIONAL EXPERIENCE

Production Manager

Thornhill, ON

Student Works Painting

March 2025 – August 2025

- Trained and managed a team of painters and marketers, establishing clear quality standards and sales techniques to drive local lead generation and ensure consistent project execution.
- Resolved daily on-site issues and enforced quality control, achieving a 100% client satisfaction rate and consistently securing 5-star reviews.

Founder & Operator

Woodbridge, ON

Cutting Edge Customs

August 2021 – September 2024

- Founded a custom fabrication business, operating laser cutting and engraving equipment to fulfill commissions for 40+ clients and generate over \$5,000 in revenue.
- Executed the precise finishing, bonding, and assembly of complex LED pieces, maintaining strict quality control and attention to detail to ensure professional visual standards for custom consumer products.

Engineering Co-op

Mississauga, ON

Garland Commercial Ranges(Lincoln) - Welbilt

May 2026 – Current

- Leads a complete redesign of a legacy control box, re-engineering the sheet metal enclosure and sourcing higher-performance, lower-cost components to reduce part cost and complexity while improving manufacturability and reliability.
- Converts a 120VAC unit to a 24VDC platform by sourcing and integrating new valve coils, power supplies, transformers, and ignition modules, reworking wiring schematics to support the new voltage architecture.
- Redesigns sheet metal enclosure and airflow architecture for the DCTI oven platform, relocating the user interface from a front-mounted, high-heat position to a safer side-mounted location, validated through thermocouple-based thermal testing.

TECHNICAL SKILLS

Design & Modeling: SolidWorks, FEA, AutoCAD | **Fabrication:** Laser Cutting, 3D Printing, Soldering, Mill, Lathe
Software & Languages: C++, Matlab, Python, LabVIEW, Microsoft Office, Java
